Pipeline Remains Shut After Spill in Louisiana on Monday

Section of a Sunoco Logistics Oil Pipeline Still Closed

Updated Oct. 14, 2014 5:30 p.m. ET

A section of a Sunoco Logistics SXL +1.27% oil pipeline remained shut Tuesday after a leak was discovered Monday morning in northwest Louisiana.

A spokesman for the Louisiana State Police said the spill was immediately contained and estimated that about 4,000 barrels of oil were released, making this one of the largest pipeline spills of this year, according to federal records. Sunoco said the size of the spill had not yet been determined.

The company said it hasn't yet determined what caused the oil leak from its Mid-Valley Pipeline. The incident occurred about 4 miles south of Mooringsport in Caddo Parish, La., and was discovered by pipeline control-room operators.

Crews have laid out booming equipment in a nearby creek where crude oil was reported to try to contain it, Sunoco said, adding that no injuries were reported and Caddo Lake doesn't appear to be affected.

The Mid-Valley pipeline carries crude oil from Longview, Texas, to Samaria, Mich., bringing oil to refineries in the U.S. Midwest. After the spill was discovered, a section of pipe between Longview and Mayersville, Miss., was shut off.
